PROJECTS

Air Quality Index Prediction Using Supervised ML algorithms

Python, Scikit-Learn, Random Forest, XGBoost, LGBM, SVR, Power BI

GitHub Repo

- Built ML models (Random Forest, XGBoost, LightGBM, SVR) to predict AQI using real - world pollution data.
- Engineered key features (PM2.5, O2, CO, NO2) to enhance accuracy.
- Optimized models via hyperparameter tuning, achieving high prediction precision (99.25%).

Skin Disease Detection System Using Depthwise Separable CNN

Python, DL, Tensorflow, Pandas, NumPy, Kaggle, MobilenetV2

GitHub Repo

- Developed a deep learning model using CNN architecture to classify multiple skin diseases.
- Integrated image preprocessing techniques to enhance model performance and reduce overfitting on a limited dataset.
- Optimized models via hyperparameter tuning, achieving prediction precision (79%).
